V-light

Epitomizes a collection of lightweight and minimalist directional furniture in its design. This line consists of tables in standard dimensions, which, owing to their simple and clean design, can be used freely as workstations or meeting tables. Augmenting its functionality, the line encompasses a streamlined array of storage furniture, including mobile pedestals and cabinets.

Central to the distinctive character of V_LIGHT is the dynamic interplay among its various components. Consistently featuring oak wood tabletops, legs, and fronts, this collection achieves a harmonious balance between form and function.

V-light_Individual Desk

V-light

At the core of the desks lies a crafted frame, enveloping the table's periphery and serving as the bedrock to which the two sets of legs and the tabletop are securely affixed.

The legs assume an inverted V shape and secure themselves to the frame by welding MIG onto tubular profiles and 5mm-thick plates. The wooden elements, integral to the levelling system, seamlessly integrate into the structure, connecting through a combination of fittings and screws.

The frame, boasting a triangular cross-section crafted from 1.5mm-thick sheets, undergoes a combination of spot-welding and TIG-welding.

Additionally, points of heightened stress and the leg attachment locations receive reinforcement through 5mm-thick sheets, elevating the overall structural integrity.

Moving to the tabletop, it consists of an 8mm-thick MDF, veneered with oak sheets. The tabletop, made from 8mm-thick MDF and veneered with oak sheets, features bushings for attachment to the frame.
